Endoscopy in inflammatory bowel disease: Role in diagnosis ...

Endoscopy has a central role in the management of inflammatory bowel disease (IBD), providing crucial data for diagnostic and therapeutic decisions, treating disease-related complications, and assisting in the early detection of dysplasia and prevention of colorectal cancer in the setting of IBD. Treatment targets have significantly shifted in IBD, focusing on achieving mucosal healing, a more meaningful endpoint than clinical remission.

Endoscopy in inflammatory bowel disease: from guidelines ...

Endoscopy is fundamental to the care of patients with inflammatory bowel disease (IBD) and is essential for diagnosing and treating both Crohn's disease (CD) and ulcerative colitis (UC). Endoscopy is used to make an initial

disease: indications, surveillance, and use in clinical practice. Fefferman DS (1), Farrell RJ. Endoscopy plays an integral role in the diagnosis, management, and surveillance of inflammatory bowel disease (IBD). Because there is no single pathognomonic test that establishes the diagnosis of IBD, endoscopy is useful in establishing the diagnosis, excluding other etiologies, distinguishing Crohn's disease from ulcerative colitis, defining the patterns, extent ...

Endoscopy in inflammatory bowel disease: indications ...

Gastrointestinal (GI) endoscopy has a pivotal role in the diagnosis of suspected inflammatory bowel disease (IBD) [1-6]. Colonoscopy with ileoscopy, esophagogastroduodenoscopy (EGD), and enteroscopy can usually differentiate between IBD and its mimics, particularly when augmented by results of histopathology. In addition, other modalities such as endoscopic ultrasonography have considerable
