Dihybrid punnett squares (practice) | Khan Academy

A dihybrid cross should produce a 9 : 3 : 3 :1 ratio in the F₂s and a simple look at the numbers will give you an idea of which belongs to each category. The biggest group is the white shorts so they must be the doubly dominant class. In other words, white shorts can be assigned the genotype W-S-. On the opposite end of the ratio, the least represented group, would be the doubly recessive so ...

Genetics Workshop Number Three. : The Chi-Square.

The most difficult aspect of successfully completing a dihybrid cross is keeping the alleles organized on the outside of the grid and being able to read your writing on the inside of the 16-square grid.

Ninth grade Lesson Dihybrid Crosses Are Twice The Fun!

Practice: Mendelian genetics questions. This is the currently selected item. An Introduction to Mendelian Genetics. Co-dominance and Incomplete Dominance. Worked example: Punnett squares. Hardy-Weinberg equation. Applying the Hardy-Weinberg equation. Next lesson. DNA technology.
