Further, the same generalized fractional kinetic equation is solved by using the Sumudu transform method. The solution of the proposed problem is presented in a compact form in term of the multivariable H-function. Some special cases, involving the H-function, generalized M-series and generalized Mittag-Laffier function are also considered.

FRACTIONAL CALCULUS AND SPECIAL FUNCTIONS

On the basis of fractional calculus, we introduce an integral of controlled paths against β -Hölder rough paths with $\beta \in (1/3, 1/2]$. The integral is defined by the Lebesgue integrals for fractional derivative operators, without using any argument based on discrete approximation.

The aim of this paper is to introduce a presumably and remarkably altered integral operator involving the extended generalized Bessel-Maitland function. Particular properties are considered for the extended generalized Bessel-Maitland function connected with fractional integral and differential operators. The integral operator connected with operators of the fractional calculus is also observed.
