Like electricity, magnetism produces attraction and repulsion between objects. While electricity is based on positive and negative charges, there are no known magnetic monopoles. Any magnetic particle or object has a "north" and "south" pole, with the directions based on the orientation of the Earth's magnetic field.

14. In what ways are electricity and magnetism alike? Electricity and magnetism both produce a force that can pull or push things without touching them. They both have opposite states: electricity has positive and negative, and magnetism has north-seeking and south-seeking. In both, opposite states attract and same states repel. 15.

Magnetism is a physical phenomenon in which matter is attracted or repelled by a magnetic field. The two sources of magnetism are electric current and spin magnetic moments of elementary particles (primarily electrons). A strong magnetic field is produced when the electron magnetic moments of the material are aligned.

Path: The actual path of a charge does not affect the amount of work done. Energy: If a charge move because of the field, it will increase its kinetic energy and decrease its potential energy. Electronvolt (eV): "Work done to move one electron across a potential difference of one volt." $1 \text{ eV} = 1.6 \times 10^{-19} \text{ J}$.

Magnets offer many benefits to the industrial world. Magnets in electric generators turn mechanical energy into electricity, while some motors use magnets to convert electricity back into mechanical work. In recycling, electrically-powered magnets in cranes grab and move large pieces of metal, some weighing thousands of pounds.

Electricity & Magnetism The interactions of electricity and magnetism are difficult to explain in nontechnical terms. This is primarily because one has to describe the interactions in terms of invisible "force fields" which shift, expand, contract, strengthen, weaken, and rotate in space, and these are very difficult to describe adequately in verbal terms.

Electricity & Magnetism

Electricity and magnetism—the two forces are inseparable. In many countries, it would be almost impos- sible to go through a day without using electricity and magnetism. Yet even complicated electrical equipment and electronics work because of the positive and negative charges that are part of tiny atoms. Electricity Man observed electricity long
