[PDF] Volume 56 Mammal Remains From Archaeological Sites ...

Excavation of a trench in the floor of a cave at Springbrook, Jackson County, Iowa, yielded bones of nine species of mammals. At a depth of 19 to 24 inches the jawbone of a porcupine and the upper right canine tooth of a black bear were found. There are no museum records of either species in Iowa. Intermingled with these remains were clam shells and ashes probably left by cave dwelling Indians.

Homework Statement: A marine mammal holds its breath and dives 200 m below the sea surface, where the total pressure is 2.061MPa. The volume of the mammal's lungs when fully inflated at sea surface (air pressure = 101.3kPa) is 7 L. Assuming that the mammal's core temperature remains constant at 310K, what will the volume of its lungs be when it reaches a depth of 200 m?

Change in a marine mammal's lung volume when diving to 200 ...
